Philanthropy Makes the Difference at Beaumont Children's

Much of the innovation and growth that Beaumont Children's has experienced in recent years has been the result of generous donors seeking to invest in and support visionary pediatric programs.

The impact of philanthropy was on display most recently with the opening of the *Florence and Richard McBrien Pediatric Neuroscience Center* at Beaumont Hospital, Royal Oak this past March, creating a centralized location for state-of-the-art McBrien Pediatric Neuroscience at Beaumont Hospital.

Other donors have helped shape pediatric care at Beaumont, with the creation of centers and programs such as:

The **Center for Exceptional Families**, providing medical and rehabilitative care for children with special needs. Supporters of this program have included dozens of community leaders including the **Emil and Stella Banich**
